Why VisitorCheck.In?

- Why paper visitor registers are a threat to being compliant?
- Why should you replace your paper visitor register?
- Have you taken steps to ensure your visitor management is GDPR-compliant?
- If a visitor wants you to delete and remove their information, how would you do this with your paper visitor book?
- Do your paper visitor registers store personal details for longer than what is needed?
- How long do you keep your paper books for?
- What do you do once the register is finished? Store it in an office drawer?
- Is personal data secure and private?
- Can anyone go through the book?
- If someone steals the book, is that data breached?
- Is your register secure from theft?
- If your visitor register goes missing are you able to restore the data?
- Why VisitorCheck.In?

Compliance :

The **VisitorCheck.In** by Smart Itcentre provides your visitors with readable terms and features an '**Opt-In tick box**', allowing the visitor to opt-in to further communications. Furthermore, your visitors can confirm that they have read and '**agree to the company privacy & visitor policy before sign-in**'.

The front screen of the web page clearly displays the privacy statement and all data is '**Opt-in**' consent driven with only (visitor name and mobile number) **Personal Data being asked for the purposes of risk assessment**.

One of the keys aspects of **GDPR** is the '**Right to Erasure**' more commonly known as the '**Right to be forgotten**'. The visitor has the right to withdraw his or her consent at any time."

Data must be kept for no longer than is necessary for the purposes for which the personal data are processed. '**With the VisitorCheck.In you can determine the length of data to be retained via the dashboard**' and in real-time **permanently delete individual visitor records as per policy** simply, quickly and without delay.

Visitor books contain personal data and if this information goes missing, you will be dealing with a data breach (which can be particularly costly in terms of fines). **GDPR requires you to secure and protect personal information and visitor books are one big list of personal information that could be abused**.

The VisitorCheck.In does not store data on the iPad or Tablets, so if the device does go missing, a data breach will not be a concern. The solution does not display a list of visitor names or employee names, therefore keeping all details private and confidential. As all data is securely stored on the online dashboard (SSL certified and operates HTTPS). **The information is kept secure and accessible only to your authorized staff**.

Visitor Emergency Alert can send out messages if the visitor has been in the premises for time longer than usual.

The VisitorCheck.In provides a modern impression to all of your visitors and starts from as little as ₹100 a day.

*Please get in touch with us and lets implement the GDPR compliant digital visitor book.

Other reasons to use VisitorCheck.in ?

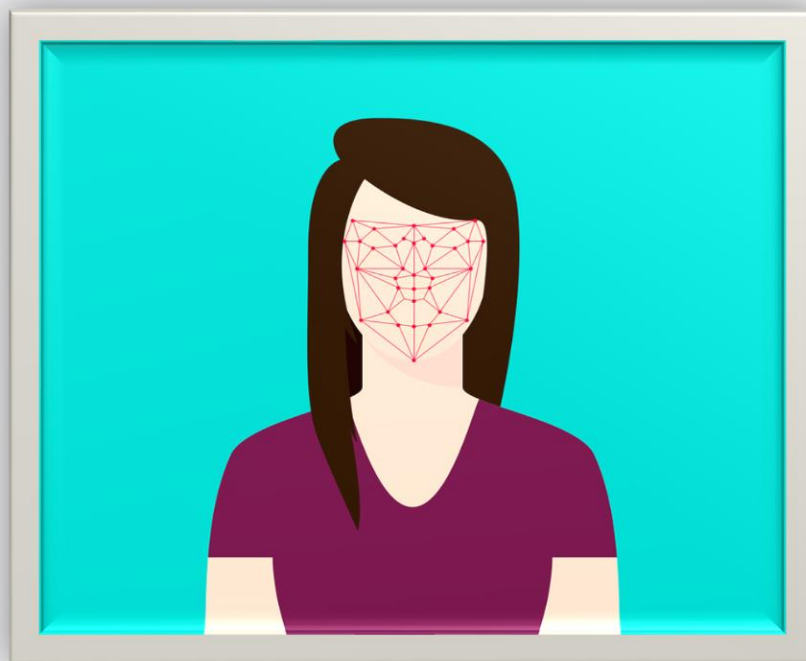

Web based Digital System offer benefits beyond security. In addition to strengthening facility security, visitor management systems also:

- **Improve productivity** — Visitors are pre-registered online and multiple visitors can be processed simultaneously. The system can be integrated with the employees existing email infrastructure.
- **Boost your corporate image** — Badges are professionally done and visitors are processed efficiently and professionally, eliminating large waiting lines in the lobby.
- **Improve visitor experience** — Because they are pre-registered or can be registered quickly, visitors are made to feel expected and welcome.
- **Control resources** — The system can track assets that visitors carry and provide visitor traffic reports for resource planning.
- **Amplify emergency response** — If the building must be evacuated, the system can be used to send alerts to the visitors within the facility, to share an eg. Just a fire drill can cause confusion as to what is happening in the building, the system can share prior updates to visitors as a headsup.

A digital visitor management system is a more secure way for a reception to authorise a visit than through word of mouth or the visitors' claim.

A web based digital visitor management system can significantly enhance facility security and process visitors quickly.
